

Water Baths

Constant & Circulating – Unified Overview and Comparison

Product Overview

Aureole Pharma Tech Water Baths are designed to provide stable and uniform temperature environments for laboratory, pharmaceutical, healthcare, and research applications. Both Constant and Circulating Water Baths share the same core construction and control philosophy, while differing in temperature uniformity and circulation method.

Common Features (Unified)

- Stainless steel inner chamber suitable for laboratory use
- Digital temperature controller with high accuracy
- Integrated timer for continuous or timed operation
- Built-in safety protection against over-temperature and low water level
- Uniform heating design for reliable incubation and testing
- Designed for pharmaceutical, healthcare, research, and food laboratories

Constant vs Circulating Water Bath – Key Differences

Parameter	Constant Water Bath	Circulating Water Bath
Heating Method	Static Heating	Heated with Forced Circulation
Temperature Uniformity	Good	Excellent
Circulation Pump	Not Available	Built-in
Capacity Range	6 – 28 L	5 – 28 L
Temperature Range	Ambient +5°C to ~99.9°C	Ambient +5°C to ~95°C
Accuracy & Stability	Standard Laboratory Accuracy	Higher Stability & Uniformity
Typical Applications	Routine incubation & QC work	Critical applications requiring uniform temperature

How to Choose the Right Water Bath

Choose a Constant Water Bath for routine laboratory heating, incubation, and quality control applications. Select a Circulating Water Bath when superior temperature uniformity and stability are critical, especially for sensitive samples or precision testing.

Need Help Selecting a Water Bath?

Our technical team can assist you in selecting the right constant or circulating water bath based on capacity, temperature stability, and application requirements.
